Modification of seawalls / construction 12	
of seawater intake & outfalls	

Not

- 1. Basement construction includes underpass roads.
- 2. Superstructure construction includes concrete works, building service & architectural builders works.
- 3. Phase 1 Concrete Batching Plant in Environmental Review for Proposed West Kowloon Terminus Concrete Batching Facility will be handed over to WKCDA starting from the year of 2014.
- 4. Demolition of the West Concrete Batching Plant will within Year 2021 with a duration of 6 monthes.
- 5. The construction of Anchorage Footbridge will begin after Year 2020.
- 6. The construction of the possible piers and viewing platform is subject to the requirements of the Protection of the Harbour Ordinacne (PHO) (Cap. 531) and therefore a programme is currently unavailable. Relevant assessments have included the construction of these two components in every year of the construction period until 2021 for worst case scenario.
- 7. The relocation of TST fire station is assumed before 2025 and have a demolition period of half year. The construction of permanent underpass and relative superstructure development will be after the demolition period and with a duration around 2 years.

Assumption for Excavation:

- 1. Assume 4 barging points with capacity of 1000m³/barge/day. (Barge size 50 to 60m in length)
- 2. Assume normal dump truck capacity 5m³/run
- 3. Assume big dump truck capacity 10m³/run (for internal use only).
